## **PRESS RELEASE**

July 2007

### ***Perry Slingsby Systems Deepwater Education Center is pleased to announce Completion of 1<sup>st</sup> Training Class in Houston***

Perry Slingsby Systems (PSS) is pleased to announce that the new state of the art Deepwater Education Center in Houston has completed its 1<sup>st</sup> four week Intervention Systems training class. The training program curriculum has been developed in partnership with the University of Houston, College of Technology. On successful completion of the program, students are awarded a certificate by PSS and the University of Houston.

Superior Offshore International, a leading provider of subsea construction services to the worldwide oil and gas industry, was the first ROV-operating contractor to graduate its ROV personnel from all four of PSS's intervention modules. "It is critical that each of our ROV personnel is qualified to operate and comprehensively manage the XLS systems," said Hamish Thomsen, ROV Manager for Superior Offshore International. "The completion of these modules by our ROV personnel presents a level of certification in-house and to our clientele."

In addition to the outstanding classroom facility, students are able to get exclusive hands on training solutions with the V-MAX® ROV Simulator.

Once again PSS have demonstrated the ability to develop and deliver innovative and practical training which both meet and exceed client requirements and expectations.

Pictured are the Superior Offshore trainees, PSS staff, Enrique Barbieri – Chair and Bill Fitzgibbon – Dean, University of Houston, College of Technology.
